EBARA Advanced Technology

Casing has been tested to a pressure of 14 bar for a test sequence in excess of 1 million cycles.

The hydro-forming process to obtain the integrated volute is patented. The volute offers higher efficiency than circular casing and the absence of a circular welding guarantees a good corrosion resistance.

Volute forming Volute

High efficiency impeller design - giving efficiencies up to 80%. Bronze impeller, forecasted impeller in AISI 316.

Hydraulically balanced impeller - reducing axial thrust and prolonging bearing life.

Standard DIN mechanical seal - allowing for a range of seal materials to suit the pumped medium.

Robust structural design - reducing the possible effects of pipe strain and subsequent casing deformation.

Casing

"Back Pull Out" design - allowing for the removal of the motor/impeller assembly, whilst leaving the casing in situ.
